Re: Puradyn Filtration System

Dear Alen:

I received the most recent hydraulic oil analysis for our 150 ton hydraulic press. Once again, the analysis shows the oil to be in excellent condition. The Puradyn filtration system, in conjunction with the manufacturer's filters, has proven to be very effective in maintaining the purity of the hydraulic oil.

Our press was installed in 1979. The hydraulic reservoir holds over 400 gallons. Based on the current price of hydraulic oil, a complete oil change would cost over \$2,200.00. Since our oil analyses continue to show excellent results, we have never had to change the oil. What a savings!

We are very pleased with the performance of the Puradyn unit. I am confident that your filtration system has saved us over \$40,000 over the past 20 years as well as extended the life of our press.

Regards,

Karla F. Aaron
President
